

Digital Engineering and Operational Technology Services

AN IDC CONTINUOUS INTELLIGENCE SERVICE

IDC covers hardware, software, and semiconductor product engineering and operational technology (OT) services (Industry 4.0), which have become increasingly critical because of the accelerated deployment of digital engineering technologies including Internet of Things (IoT), Industry 4.0 implementations, AR/VR, computer vision, robotics/autonomous systems, 5G, edge, digital thread/twins, and other new digital technologies. It is anticipated that the *Digital Engineering and Operational Technology Services* CIS will be the foundation for market research related to all technologies that will enable customers to envision and build better technology products/platforms, get their products to market faster, achieve high end-customer satisfaction, and infuse resiliency into their operations.

Markets and Subjects Analyzed

The *Digital Engineering and Operational Technology Services* CIS will analyze the R&D/product engineering processes associated with the creation and management of a product/platform, as well as those services associated with maximizing the life span and optimizing the yield associated with technologically complex products or assets. This research area has become more prominent in the past year, given the increased interest and adoption in digital engineering implementations.

As customers aspire to get their products to market faster and build resiliency into their operations, they are seeing immense value in the global infrastructure, diverse digital/engineering talent, domain engineering expertise and experience, technology partnerships, intellectual property, and many other benefits. Users of this IDC CIS service will benefit from deeper insights about end-user demand for product engineering services, spending intentions, a worldwide spending forecast, thought leadership related to digital technologies influencing the growth for digital engineering and operational technology services and a series of vendor profiles.

This service will analyze a whole new range of buyers and suppliers not directly associated with the IT function, such as research and development, product development, and VP of engineering and specialty product engineering services vendors. Note: Traditional IT service providers that provide product engineering and OT services will also be analyzed.

Core Research

- Worldwide and U.S. Digital Engineering and OT Services Forecast and Analysis
- Worldwide Digital Engineering and OT Services Vendor Competitive Analysis
- Buyer Adoption Patterns and Spending Intentions for Digital Engineering and OT Services
- Buyer Case Studies and Vendor Profiles of Digital Engineering and OT Services Initiatives

In addition to the insight provided in this service, IDC may conduct research on specific topics or emerging market segments via research offerings that require additional IDC funding and client investment. To learn more about the analysts and published research, please visit: [Digital Engineering and Operational Technology Services](#).

Key Questions Answered

- What are the emerging market trends with respect to digital engineering and operational technology services?
- What strategies are firms adopting, and how are they adjusting their capabilities to respond to new market needs?
- Which firms can best leverage the increasing market demand for digital engineering and operational technology services?
- How are new digital technologies in combination with traditional engineering services helping customers accelerate innovation and build resilient operations?
- How can buyer organizations evaluate which engineering services providers to consider either for product development or for overall operational technology process transformation?

Companies Analyzed

This service reviews the strategies, market positioning, and future direction of several providers in the *Digital Engineering and Operational Technology Services* market, including:

Accenture, AkkaModis, ALTEN, Altran, Aspire Systems, Atos, Bertrandt, Bosch, Capgemini Engineering, Cognizant, Cigniti, Cybage, Cyient, Deloitte, DXC+Luxoft, elfochips (an Arrow company), Endava, EPAM, EY, Fujitsu, Genpact, GlobalEdge, Globant, Happiest Minds, Harman, Hitachi+GlobalLogic, HCL, Hughes Systique, IBM, Infogain, Infosys,

Infostretch, Innominds, Jalasoft, KPIT, KPMG, LTTS, Mindtree, McKinsey & Company, Mphasis, Ness, NTT DATA, Pactera, Persistent, PwC, QuEST Global, R Systems, Sasken, SoftServe, Sonata, Talentica, Tata Elxsi, Tata Tech, Tieto, TCS, Tech Mahindra, Wipro, and Xoriant.
