

Personal Computers and Tablets

AN IDC CONTINUOUS INTELLIGENCE SERVICE

IDC's *Personal Computers and Tablets* service provides qualitative analysis of the worldwide personal computer (PC) and tablet marketplaces. This program tracks the progress and long-term impact of emerging and established trends in the PC and tablet markets. New and traditional computing opportunities, such as Chromebooks, gaming PCs, and detachable and slate tablets, are evaluated based on timely market intelligence from manufacturing sources, vendor input, component suppliers, and extensive knowledge of influential analysts. This service provides PC and tablet vendors, component suppliers, and investors with the information necessary to make critical business decisions.

Markets and Subjects Analyzed

- U.S. and worldwide PC and tablet industry developments by region, form factor, channel, and segment
- Analysis of notebooks and tablets by screen size
- Analysis of interface technologies embedded into PCs
- Quarterly growth forecast by form factor and segment
- Buying patterns among consumer and commercial PC and tablet buyers
- Changes in market share position among major vendors
- Impact of LTE and 5G attach rates
- Detailed views of customer segments
