

# European eSignature

---

eSignature software solutions issue an encrypted, signed document from a sender; transport it via a secure communications channel; present the document to the signer(s); record the signer's actions; re-encrypt the document; and return it to the originator via secured communications.

IDC's *European eSignature* is focused on European eSignature market dynamics, end-user insights, market players, and market forecast. It is designed to help eSignature market players better understand the market dynamics, opportunities, and competitive landscape in a highly fragmented European market. Local and global market players, often fueled by private investors, are competing for rapid pan-European expansion as business demand for eSignature solutions surges.
