Agile Value Management

Our clients tell us that Agile development is unpredictable and 30% more expensive. Would you like to derive the full value of Agile?

The Agile Value Management consulting service enables organizations to gain visibility into the productivity, costs, speed, and quality of Agile development, so they can improve them. Agile Value Management gives concrete recommendations to improve Agile development. All based on international standards, industry best practices and it’s fully auditable. Keep control on cost, time to market and quality (25% average cost reduction, 30% productivity improvements, 60% reduction in incidents).

Cloud Economics

In today’s cloud-first world, businesses are struggling to catch up to the variable nature of cloud spending. Are you challenged by the high costs of your cloud applications?

Cloud Economics is a concierge service that takes the stress and difficulty of understanding and optimizing Cloud expenses and provides visibility and control in simple, tailored dashboards with actionable advice to ensure the value received is commensurate with the investments made. It also provides easy communication of chargebacks to key stakeholders. CE clients typically gain up to 35% cost reduction for inexperienced organizations and 10-15% for mature Cloud organizations and up to 100% visibility.
